WeProp - Modern Property Management Software

Project Description

As more properties are built, there is a growing demand for property management systems. However, in today's information-rich era, traditional property management systems ignore the needs of the tenants and tend to provide functions that are beneficial to the management company's operations. The project team hopes that the system will improve the efficiency of the management company and improve the communication and interaction between the management staff and residents and the access control of the residents and visitors through the functions provided by the system.

隨著愈來愈多的物業落成，坊間對物業管理系統的需求愈來愈大。然而，在現今資訊發達的時代裡，傳統的物業管理系統忽略了住戶方的需求，傾向提供有利於管理公司一方運作的功能。此作品提供解決這一新興用戶需求的方案，團隊除了希望系統能夠改善管理公司的工作效率，亦希望透過系統所提供的功能改善了雙方之間的溝通和互動，以及改善住戶及訪客的出入管理。

Project Features

- 住戶及屋苑管理
Account and Residential Management
- 提交意見予管理公司
Send Feedback to the Management
- 業主立案法團
Owners' Corporation
- 傳送電子通告
Send Announcements
- 包裹暫存
Hold-for-Collection
- 屋苑出入管理
Property Access Control
